

ABSTRACT

An image formation apparatus is disclosed,
wherein a time interval between a first ink drop and
5 a second ink drop is set at $1.5 \times T_c$, a time
interval between the second ink drop and a third ink
drop is set at $1.5 \times T_c$, and a time interval between
the third ink drop and a fourth ink drop is set at 2
 $\times T_c$, where T_c represents the specific vibration
10 cycle of a pressurized ink chamber.
